

4.0 **POSTING SERVICE OFFERS TO OASIS**

In this section:

[Price Posting Times](#)
[ATC Posting Times](#)

4.1 **Price Posting Times**

Transmission prices for future days (up to 168 hours) and Loss Compensation prices for Day +1 are updated and posted daily in the morning on OASIS.

4.2 **ATC Posting Times**

Posting times noted within this section are when British Columbia Transmission Corporation's automated Scheduling Application initiates the posting process and will differ from the time the data is actually posted to OASIS. The time it takes to post varies depending on volume of data being posted and performance conditions. To determine the exact time of a posting to OASIS, click on the reference number of the offering and check the "last updated" field.

Also, posting frequencies can vary due to the following rules:

1. British Columbia Transmission Corporation's Scheduling Application triggers a posting of its current ATC every 5 minutes (starting at 00:00:00) unless a previous posting is still underway. The Scheduling Application can only process one ATC posting at a time and once complete the ATC postings will proceed to the next closest 5 minute increment.
2. If reinstatement opportunities have been identified for a particular path, the ATC posting for that path will remain blocked while processing reinstatements (refer to Section 12.3).
3. If there is a displacement pending on a particular path, OASIS transmission request processing for that path and associated paths will be suspended until the displacement is complete.

The following is posting information for specific time periods:

Pre-schedule

00:00:00 – 07:29:59

Pre-schedule checkout (17:00:00) triggers one posting shortly thereafter and another one at midnight of TTC/ATC for all service increments and prices for all service increments excluding Hourly. The first posting to OASIS is for Day +1 through Day+7 (up to 168 hours) while the second posting is for Day +2 through

Day +8 (up to 168 hours). Thereafter, TTC/ATC updates (changes from previous posting) are uploaded to OASIS every 5 minutes.

07:30:00 – 07:59:59

During this time period automated processing of Pre-schedule OASIS transmission requests is halted along with the 5 minute interval OASIS uploads of ATC/TTC. This is done in order to improve the efficiency of the simultaneous posting of Hourly, Daily and Monthly TTC/ATC, and prices which occurs during this time period.

If ATC posting has not concluded by 07:55:00 the window for accepting new OASIS transmission requests and the more frequent 5 minute OASIS posting will be delayed by 15 minute increments until posting concludes.

08:00:00 – 23:59:59

TTC/ATC postings for Day +1 are automatically posted to OASIS every 5 minutes with the exceptions noted above and in the introduction of this section.

Real-time or Day of Service

00:00:00 – 23:59:59

ATC is uploaded to OASIS every 5 minutes subject to the exceptions noted in the introduction of this section.

Additional Information

- Monthly TTC forecasts are only updated every few weeks.
- British Columbia Transmission Corporation does not post weekly offerings since Customers can purchase weekly service starting any day from Day +1 to Day +14. Refer to Section 5.1 for further information on Submitting a Transmission Request on OASIS.
- British Columbia Transmission Corporation does not post long-term offerings; long-term service is by request only since additional study work and new facilities may be required to serve the transmission request.
- Transmission requests can be submitted at any time with the exceptions noted above. Customers do not have to wait for ATC to be posted prior to submitting a transmission request.
